

RAJESHWARI GAJENDRAN

Software Developer Aspirant | Java | Full Stack Development | IoT Systems

ramyagajendran945@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | 91-9789812567 | Chennai, India

PROFESSIONAL SUMMARY

Computer Science Engineering undergraduate with hands-on experience in Java, Full Stack Web Development, and IoT-based systems. Published and presented research at ICSIE 2026 on an IoT-enabled Fire Detection and Automated Water Suppression System. Built and deployed multiple web applications with real-world functionality including an AI-powered GitHub Portfolio Analyzer using the Claude API. Seeking an entry-level Software Developer role where I can contribute strong technical and problem-solving skills from day one.

EDUCATION

B.Tech – Computer Science and Engineering | **Bharath Institute of Higher Education and Research, Chennai** *2022 – 2026*

- CGPA: 8.10
- Coursework: Data Structures & Algorithms, OOP (Java), DBMS, Operating Systems, Computer Networks, Web Technologies

INTERNSHIP / TRAINING

Web Full Stack Developer Virtual Internship | **EduSkills Academy (AICTE – National Internship Portal)** *Jan - Mar 2025*

- Completed an AICTE-recognised 10-week virtual internship covering frontend (HTML/CSS/JS/React), backend, and deployment workflows.
- Hands-on experience with REST APIs and responsive web development.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Web Technologies: HTML5, CSS3, JavaScript (ES6+), Bootstrap, PHP, Responsive Design

Databases: SQL, MySQL, Firebase

APIs & Tools: GitHub API, Claude AI API, REST APIs

Tools & Platforms: VS Code, Git, GitHub, GitHub Pages, InfinityFree, Blynk IoT, ThingSpeak

Hardware / IoT: ESP8266, ESP32, Multi-sensor Integration, PWM Control

PROJECTS

IoT-Based Fire Detection & Automated Water Suppression System | **Research Project**

- Engineered a multi-sensor IoT safety system using ESP8266/ESP32 with flame, smoke, and temperature sensors — achieving sub-3-second threat detection in lab tests, improving response time over single-sensor designs.
- Designed an asynchronous telemetry pipeline using Firebase and ThingSpeak, establishing real-time data logging and remote monitoring arrays.
- Research accepted and presented at the 16th International Conference on Sustainable Innovative Engineering (ICSIE 2026).

Tech Stack: ESP8266/ESP32, C++, Firebase, Blynk, ThingSpeak, PWM

GitInsight - GitHub Portfolio Analyzer | **Personal Project**

- Built a full-stack GitHub profile analyzer that computes a developer score from 6 weighted signals including repo count, stars, followers, language diversity, and documentation quality - deployed on GitHub Pages with zero dependencies.
- Leveraged the Claude AI API to architect an automated analytics engine, parsing live GitHub payload data to generate dynamic skill-gap vectors and tailored project recommendations.
- Implemented a 53-week contribution heatmap, language distribution bar, and one-click PNG profile card download using html2canvas - enabling recruiters to instantly assess any developer profile.

Tech Stack: HTML, CSS, JavaScript, GitHub API, Claude AI API, html2canvas | [Live Demo](#)

Weather Application | **Personal Project**

- Built a fully responsive weather app fetching real-time data via Open-Meteo REST API (no API key required), displaying dynamic temperature, humidity, and 5-day forecasts - handles 50+ city queries with under 1s load time.
- Engineered robust exception handling and fallback states for API network timeouts, ensuring seamless UX continuity during edge-case failures.

Tech Stack: HTML, CSS, JavaScript, REST API | [Live Demo](#)

RESEARCH & ACHIEVEMENTS

- Published and presented a peer-reviewed research paper at ICSIE 2026.
- Ranked among top performers in the EduSkills NEAT cohort - selected for the AICTE-recognised Full Stack internship, a nationally competitive program.
