

RAJESHWARI GAJENDRAN

Software Developer Aspirant | Java | Full Stack Development | IoT Systems

ramyagajendran945@gmail.com | [LinkedIn](#) | [GitHub](#) | [portfolio](#) | 91-9789812567 | Chennai, India

PROFESSIONAL SUMMARY

Computer Science Engineering undergraduate with hands-on experience in Java, Full Stack Web Development, and IoT-based systems. Published and presented research at ICSIE 2026 on an IoT-enabled Fire Detection and Automated Water Suppression System - one of the few undergraduates to achieve a peer-reviewed publication. Built and deployed multiple web applications with real-world functionality. Seeking an entry-level Software Developer role where I can contribute strong technical and problem-solving skills from day one.

EDUCATION

B.Tech – Computer Science and Engineering | *Bharath Institute of Higher Education and Research, Chennai* 2022 – 2026

- CGPA: 8.10
- Coursework: Data Structures, OOP (Java), DBMS, Operating Systems, Computer Networks, Web Technologies

INTERNSHIP / TRAINING

Web Full Stack Developer Virtual Internship | *EduSkills Academy (AICTE – National Internship Portal)* Jan – Mar 2025

- Completed an AICTE-recognised 10-week virtual internship covering frontend (HTML/CSS/JS/React), backend, and deployment workflows across 4+ hands-on projects.
- Gained practical exposure to REST APIs, responsive design, and agile-style project implementation - directly applicable to production environments.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript

Web Technologies: HTML5, CSS3, JavaScript (ES6+), Bootstrap, PHP, Responsive Design

Databases: SQL, Firebase

Tools & Platforms: VS Code, Git, GitHub, GitHub Pages, Blynk IoT, ThingSpeak

Hardware / IoT: ESP8266, ESP32, Multi-sensor Integration, PWM Control

PROJECTS

IoT-Based Fire Detection & Automated Water Suppression System | *Research Project* 2025 – 2026

- Engineered a multi-sensor IoT safety system using ESP8266/ESP32 with flame, smoke, and temperature sensors - achieving sub-3-second threat detection in lab tests, improving response time over single-sensor designs.
- Integrated Blynk, Firebase, and ThingSpeak for real-time remote monitoring and cloud logging; implemented PWM-based automated pump control, eliminating need for manual intervention during alerts.
- Research accepted and presented at the 16th International Conference on Sustainable Innovative Engineering (ICSIE 2026).

Tech Stack: ESP8266/ESP32, C++, Firebase, Blynk, ThingSpeak, PWM

Weather Application | *Personal Project* 2026

- Built a fully responsive weather app fetching real-time data via OpenWeatherMap REST API, displaying dynamic temperature, humidity, and 5-day forecasts - handles 50+ city queries with under 1s load time.
- Implemented error handling for invalid city inputs and network failures, improving user experience robustness.

Tech Stack: HTML, CSS, JavaScript, REST API [Live Demo](#)

Blog Website | *Personal Project* 2026

- Designed and deployed a blog with semantic HTML5/CSS3 and mobile-first responsive layout, structured for easy content scaling.
- Implemented JavaScript features including dynamic post filtering, smooth scroll, and a dark/light mode toggle

Tech Stack: HTML5, CSS3, JavaScript [Live Demo](#)

CERTIFICATIONS

Web Development Training | Internshala Trainings Oct 2024

Technology Job Simulation – Coding & Development | Deloitte via Forage Mar 2026

RESEARCH & ACHIEVEMENTS

- Ranked among top performers in the EduSkills NEAT cohort - selected for the AICTE-recognised Full Stack internship, a nationally competitive program.
- Self-initiated 2 independent projects (Weather App, Blog) entirely beyond academic requirements - all deployed live, reflecting consistent
